Simple Yet Powerful

Providing the widest range of functions for an installer available today (as standard options), the 360 DSP includes virtually all the testing options an installer or service technician needs to verify service quality and easily identify and fix problems in the field.

Autotest Apps

The 360 DSP features next-generation autotest applications that practically walk the technician through a job. By performing standardized measurement tests at various required locations on the job site using user set test plans, channel plans, and limit sets, the meter very clearly indicates (using color and symbols) what areas still need attention, before the technician leaves the job site.

Multi-user support allows technicians that work in various territories to easily switch channel plans, standardized autotest apps, and test limits or login as a completely different user. Connecting to ViewPoint allows techs to upload job data in near real-time as well as transmit and receive channel plans, autotests, and firmware.

Leaving less room for entry error, this new simple user interface can translate into less training and more efficient time in the field for techs. The 360 DSP comes equipped with all of the required troubleshooting tools for the advanced technician. It also offers a higher comfort factor for novice technicians, reducing decision making in the field, which can ultimately result in more productive work days and more satisfied customers.

Justify ROI

Field operations managers can now easily verify that all of their technicians are performing the proper tests and are doing so at the right place and time—in near real-time. The potential benefits include identifying techs who need additional training, improving team performance, reducing truck rolls, and cutting operating costs.
At a higher level, ViewPoint can deliver simple, standardized, system-wide reports and dashboards that can help a director or VP of technical operations view the entire operation at a glance to gain information that can be used to reduce service and repeat trouble calls.

Essentially, this integrated system approach allows cable operators to see much more of their certification operations and use the information in practical ways. The insights can enable them to identify both localized problems and high-level system issues to make decisions based on a clearer understanding of their overall operations and the associated ROI.

Combining 360 DSPs in the field with the new ViewPoint WFM Module in the back office, managers can view the health of their entire system—in near real-time, for total RF installation management.

TOTAL SYSTEM MANAGEMENT

Combining the 180 DSP, 360 DSP, 720 DSP & 1G DSP meters in the field with the new ViewPoint Integrated Server in the back office, managers now have simplified access to intelligent management tools for monitoring, assessing and improving the efficiency of their total operation while making it even easier to obtain consistent, repeatable results that give supervisors that birds-eye view of the field for Total System Management.
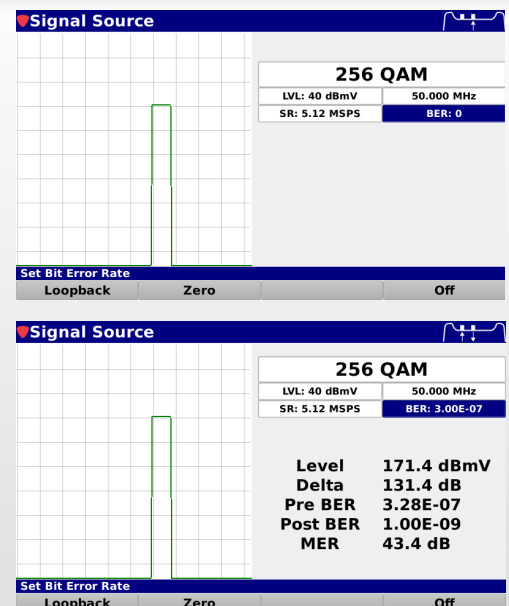

By unifying an entire MSO's field operations in one convenient dashboard, managers can easily verify compliance and quality throughout the entire plant, either by home, system, region, division, or any other attribute from a billing system.

This simple and completely customizable integrated system of field analysis and reporting tools allows managers to watch over their entire field operations in one dashboard, comparing each location in the system, analyzing the overall health of their entire organization, and addressing concerns in near real-time.

■ The Network Manager view allows users to quickly and easily use the internal cable modem for network connectivity and performance testing
■ Upon connecting, the Network Manager displays the MAC address, IP address, subnet, gateway, and DNS information for the cable modem network connection
■ The Cable Modem Statistics view provides a summary that displays the type of Cable Modem being used, meter IP address, and modem IP address

■ This view also displays the current channel bonding along with the min/max/avg Rx Level & BER of the downstream channels and the min/max/avg Tx Level of the downstream channels

Upstream & Downstream Cable Modem Statistics

■ Internal DOCSIS 3.1 modem that operates in both DOCSIS 3.0 (32x8) and DOCSIS 3.1 modes

■ Displays the ID, channel frequency, Tx Level, SNR, PreBER, and Post BER of each upstream channel
■ Measure up to 32 downstream SC-QAM channels when operating in a DOCSIS 3.0 only environment

■ Measure up to two (2) downstream OFDM channels and 30 downstream SC-QAM channels when operating in a mixed DOCSIS 3.0 & DOCSIS 3.1 environment

■ Displays the primary status, channel frequency, Rx Level, SNR, PreBER, and Post BER of each downstream channel
## IN-BAND RETURN SWEEP (OPTIONAL)

Cable Modem (CM) Sweep

■ The *CM Sweep Option* is a first of its kind, patent pending sweep that uses the cable modem built into the meter to perform in-band sweeps within your modem carriers

■ This feature not only allows operators to balance the upstream, but also allows them to see the percentage of pre-qualizer effort and isolate problems between active components without causing any issues with upstream modem performance

■ When this function is selected, the meter injects up to four upstream modem carriers to talk back to the CMTS and use the pre-equalized data for each of the upstream carriers to plot a frequency response of what your upstream sweep would look like with injected carriers

■ This feature doesn't require any expensive headend sweep gear and works with any DOCSIS 3.0 or DOCSIS 3.1 compatible CMTS with pre-EQ enabled
INGRESS UNDER CARRIER MEASUREMENTS

Upstream Traffic Control Plus (OPTIONAL)

■ Allows for a high-speed real-time view of ingress in the upstream

■ Heat map allows for simplified view of ingress hotspots

■ 100% coverage so technicians can see the shortest cable modem bursts and ingress even under the busiest upstream
Downstream QAM Error Vector Spectrum (OPTIONAL)

■ Tune to downstream QAM channels to display Error Vector Spectrum (EVS)

■ Display the ingress that is present "underneath" an upstream cable modem channel, or any bursty signal
