User/Installer Responsibilities					
It is important to understand that the existence of this document alone does not automatically constitute authority to install the aircraft engine/propeller/article. Where the user/installer performs work in accordance with the national regulations of an airworthiness authority different than the airworthiness authority of the country specified in Block 1, it is essential that the user/installer ensures that his/her airworthiness authority accepts aircraft engine(s)/propeller(s)/article(s) from the airworthiness authority of the country specified in Block 1. Statements in Blocks 13a and 14a do not constitute installation certification. In all cases, aircraft maintenance records must contain an installation certification issued in accordance with the national regulations by the user/installer before the aircraft may be flown.

Notice regarding compliance with Proposition 65 for Arsenic: By accepting the products shipped under this packing slip/invoice, you agree that you or your customers, as applicable, will instruct each end-user of any such product as follows:

All carbon block filters require flushing prior to use. Flush carbon block filter at the rated flow rate for at least 5 minutes prior to using the water from the filter. We require flushing of no less than 10 bed volumes for point of entry products having bed volumes of 0.5 cubic feet or less and all point of use products. For point of entry products having bed volumes of greater than 0.5 cubic feet, the initial flushing is no less than 10 gallons.
