Quality Management System according to ISO 9001:2008

- Certified since 1994
- Implementation of our
Company Policy and
Corporate Mission
- Guaranteed high quality of
our products and services
- Well-defined and clearly
structured processes
- Continuous improvement of
our:
 - management processes
 - business processes
 - supporting processes

Stud Welding – Advantages

Saves time. Saves money. Unchallenged.

No reworking!

In many areas stud welding is the most economic fastening method for components. If using thin sheet metal, stud welding is often the only technical solution.

Tremendous time and cost savings

No: drilling - punching - threading - gluing - riveting - screwing

New design potential

- Very low distortion by extremely short welding time
- No leaking caused by drilled holes
- High strength
- One-sided accessibility of the component is sufficient
- Weldable even onto very thin plates
- Joining of different materials is possible

Unsurpassed economy

- Can be automated to a very high degree
- Very short welding time (1 ms to 1 500 ms), fast weld rates
- Fast and easy handling, leads to high productivity
- No marks on backside of coated or high alloyed plates
- Low prices for standard studs

CD

Capacitor Discharge (CD) stud welding with tip ignition

HBS stud welding units provide outstanding reductions in costs and time. Every weld is precise avoiding any need for post treatment.

The recipe for success:

Extremely short welding time! (1 to 3 ms). No additional welding products are needed.

Because of a very low thermal load, the welding zone is minimal. In this way, distortion of the work piece is avoided. Often this is the only applicable technical solution.

Contact or gap

In contrast to contact welding, with gap welding the stud is positioned at a defined distance shortly before welding starts. This creates a higher plunging speed which leads to a shorter welding time (only 1 ms!).

This characteristic also allows welding of difficult materials like e.g. aluminium and brass.

Joining of stud-type welding elements with a diameter M3 to M10 (dia. 2 to 10 mm) onto thin sheets, min. 0.5 mm. Mild steel, stainless steel, aluminium and brass.

An arc is ignited between the face of stud and the surface of a work piece.

Both parts are melted, the stud is gently pressed against the work piece and then joined together.

The molten areas solidify. The extremely short and clean welding process does not require any machining.

As a result, an even and complete joint is achieved with a strength which is above the strength of stud and base material. The low thermal load provides welding onto thin sheets without damage to the rear side.

Keep it simple. Save time and money.
Unmatched economic efficiency with HBS.

CD

**Best Solution
Best Results**

Typical applications include:
Sheet metalwork, electronic industries, switchboard cabinets, laboratory and medical equipment, food industry, household appliances, etc.

When studs are welded to thin sheets (steel, aluminium and brass), the procedure of tip ignition will always be the most cost effective process and sometimes the only solution.

CD

Cutting edge technology is combined with time proven stud welding units

The professional generation

The HBS R&D department unceasingly reviews components for new, improved, cost effective and efficient technology to keep all HBS products at the cutting edge.

All the available experience and knowledge in the stud welding industry are part of HBS products which we have been developing for over 40 years. HBS welding elements are a part of this technology.

Studs to fasten trowel handle

Cutting edge technology

C 06-3

Simple – no setting required for lift and spring pressure. Stud welding gun specially paired with power source for outstanding results.

CA 08

High-performance stud welding gun for tip ignition process of gap welding. High accuracy by zero-play ball linear bearing for guiding the welding piston.

C 08

Rugged casing with ergonomic grip. All-rounder also used for welding aluminium studs to M4 (#8).

CI 03

For welding cupped head pins. Fixing HVAC insulation matting (heating, ventilation and air-conditioning).

ACCU-TWIN

Battery powered

- Especially suitable for welding heat costs measurement systems through twin stud welding

2 x M3

Welding process	CD
Welding material	 
Welding range	2 x M3
Welding rate	2 twin welds per minute
Capacitor charging time	approx. 30 sec
Battery	12 V, 5 Ah
Battery capacity	200 twin M3 welds
Battery charging time	Max. 10 hours
Battery life	Min. 200 charging cycles
Stud spacing	Stepless adjustable from 25 mm up to 61 mm (from 19 mm upon request)
Welding gun cable length	approx. 1.1 m
Capacitance	80 000 µF
Energy	325 Ws
Charging voltage	Max. 90 V
Power source	Capacitor
Dimension LxWxH	360 x 135 x 210 mm (Gun 165 x 25 x 95 mm)
Weight	7 kg (incl. welding gun - 550 g)
Gun	Supplied fixed - non interchangeable

Order No.

92-10-2380A (including toolbag, grinder, power supply cable, cable for 12 V car connection and assortment box)

Welding process: CD = Capacitor discharge stud welding

Mild steel

Stainless steel

Grinding equipment to remove paint on the radiator

Two charging options:
power supply cable and
cable for 12 V car connection

Assortment box for
accessories in tool pocket

Magnetic storage box for
quick access to studs

ARC

Drawn arc (ARC) stud welding with ceramic ferrule or shielding gas

The process drawn arc stud welding is mostly used for stud diameters of 3 to 25 mm and a welding time of 100 to 1 500 ms.

Drawn arc stud welding with ceramic ferrule is recommended for studs with diameter of more than 12 mm. If it is required to protect the weld pool from atmosphere, shielding gas should be used. This process variant is also used with automated applications.

Welding process with ceramic ferrule: Joining of stud-type welding elements with a diameter 2 to 25 mm (M24) onto thicker sheets of about 2 mm or higher. Mild steel and stainless steel

The welding stud is lifted and a secondary arc (pilot arc) of low current is ignited between stud tip and workpiece.

Then the ignition of the main arc is carried out. Stud and workpiece are melted. The stud is moved to the workpiece, the two molten zones join.

The molten areas solidify. The short and clean welding process does not require any machining.

As a result, an even joint strength is achieved which is above the stud and base material.

Tremendous time and cost savings
Unmatched economic efficiency with HBS

ARC

**Best Solution
Best Results**

Specifically designed for thicker sheets of about 2 mm or higher. Application ranges: steel construction, engineering construction, shipbuilding industry, vehicle construction, structural and civil engineering.

ARC Drawn arc stud welding with ceramic ferrule, shielding gas or without weld pool protection.

SC

Short Cycle (SC) drawn arc stud welding

High current, shorter duration of welding time

The welding sequence is the same as the sequence of drawn arc welding (ARC), however, with relatively higher currents and shorter welding times (max. 100 ms). The short cycle drawn arc stud welding is very suitable for stud diameters up to 12 mm on thin metal sheets.

Also without shielding gas

Up to 8 mm stud diameter, the process is often carried out without weld pool protection. Normally studs with flange are used to achieve high tensile strengths in spite of pores in the weld zone.

The short cycle process is especially suitable for welding of material combinations like steel (base material), stainless steel (stud) as well as aluminium. To achieve a high welding quality, use of shielding gas is recommended.

Joining of stud-type welding elements with a diameter 2 to 12 mm onto thin sheets, min. 0.5 mm. Mild steel, stainless steel and aluminium.

The welding stud is lifted and a secondary arc (pilot arc) of low current is ignited between stud tip and workpiece.

Then the ignition of the main arc is carried out. Stud and workpiece are melted. The stud is moved to the workpiece, the two molten zones join.

The molten areas solidify. The short and clean welding process does not require any machining.

The low thermal, accurate load provides welding onto thin sheets.

Best results
Best price-performance ratio

SC

**Best Solution
Best Results**

Multiple applications with:
studs, tapped pads and pins
onto thin metal sheets. A wide
field of application is in vehicle
construction, in particular
using fir tree studs to fasten
conduits and trims.

With ARC and IT stud
welding units for short cycle
drawn arc stud welding.
(with and without shielding
gas).

IT Inverter technology for drawn arc and short cycle

The first complete inverter series with welding current up to 2600 A.

Best welding quality

Very high arc stability even at weak welding current. In this way, a constantly optimized welding quality is achieved even with large mains voltage fluctuations.

Ahead of competition by dynamics

Dynamic regulation of the welding process through high process reliability and consistency.

Highly cost effective

The innovative inverter welding power source provides a higher efficiency of 80 % compared with conventional power sources. In this way, energy consumption is reduced by 50 % (smaller generators = 50 % less diesel fuel consumption).

Realisation of highest quality demands, even welding on difficult geometrical shapes.

Top in:

- Outstanding welding quality – very high arc stability
- Process monitoring
- Compact, highly mobility
- Up to 100 % higher welding rate compared with conventional transformer machines

HBS EFFICIENT TECHNOLOGY

Reduces energy consumption and weight.

Increases welding quality and welding rate.

Innovative and future-oriented technology, integrated in the compact and very mobile inverter welding units from HBS.

HBS inverter technology means:

Maximum welding quality

Maximum welding rates

Minimum energy consumption

Minimum weight

Maximum efficiency

Quality

Best welding quality through extremely high stability of the arc, even at weak welding currents or large fluctuations of the mains voltage.

Welding rates

Highest welding rates – increased by 100 % compared to standard conventional transformer technology.

Energy consumption

Minimized energy consumption – energy needed is reduced by 50 % compared to standard welding units with transformer technology.

Weight

Minimized weight – inverter technology reduces the weight by 50 % compared to welding units with transformer technology.

Degree of efficiency

Maximum degree of efficiency – innovative inverter technology offers best input / output ratio.

MARC

Innovative ARC welding technique

HBS presents MARC, a manual nut welding system which is more and more replacing traditional processes all over the world due to the innovative procedure with a magnetic rotating ARC.

Regardless of whether only static stability is required or if additional, customerspecific connection properties (e.g., pressure tight) need to be fulfilled, you always achieve the best results – with considerable time and cost savings.

Spatter free joints can be achieved with a high welding cycle time of up to 10 welds/minute. This is especially suited for thin metal sheets from 1 mm upwards.

MARC provides the access to a new future to international trusts, medium-sized companies as well as to crafts enterprise.

Joining of
welding elements

A burning arc is put into rotation in a controlled way. A ringshaped weld pool is generated where the welding element is plunged in.

The very precise and clean welding process does not require any subsequent machining of the workpiece or welding element (e.g. caused by distortion or welding spatters at the thread).

The molten areas solidify. The short and clean welding process does not require any machining.

Based on a very short welding time and low energy consumption, extraordinary welding results are achieved featured by high process stability and best economical efficiency.

Optimum results, efficiency and a convincing price/performance ratio provide advantages with view to competition.

MARC

Best Solution
for Best Results

Welding of pads and nuts on punched and unpunched metal sheets.

Applications are e.g. sprinkler systems, ventilation tubes, hinges, pressure vessels, exhaust systems.

93-20-242 (Welding gun AM 12 A)
93-60-1202 (Welding unit IT 1002)
93-40-020 (Ground cable, 5 m, 25 mm², 2 vice grips 10")

Complete equipment for AM 12 A:

93-40-0030068 for Hex^{Nut} M6
93-40-003008 for Hex^{Nut} M8
93-40-003010 for Hex^{Nut} M10
93-40-003012 for Hex^{Nut} M12

Dimension of welding element					
	Dimension	M6	M8	M10	M12
	Height Hex ^{Nut}	8	8	9	11
	Width across flats	AF14	AF14	AF17	AF19
Bore diameter	Bore diameter - metal sheet (based on DIN EN ISO 4032)	10.6 ^{+0.1...+0.4}	10.6 ^{+0.1...+0.4}	12.6 ^{+0.1...+0.4}	14.9 ^{+0.1...+0.4}
Tightening torque	Tightening torque in Nm (μ = 0,18)	3.8	9.5	19.0	33.0

PC-M3

- The most effective as well as most economical welding procedure for the welding hollow cylindrical parts
- Closed and pressure sealed weld all-over
- For gas tight connections like e.g. at exhaust systems
- Energy controlled welding system

Min. dia. 8 mm, max. dia. 32 mm
or internal thread M4 to M18

Welding range	Min. dia. 8 mm, max. dia. 32 mm or internal thread M4 to M18 Min. dia. 5/16", max. dia. 1.26 mm or internal thread #8 to 0.71"
Height of nut	Min. 4 mm, max. 30 mm Min. 0.16", max. 1.18"
Welding material	Weldable, high and low alloys, mild steel
Welding rate	Depending on dia. 12 pieces/min (dia. 28, dia. 1.10" approx. 2 to 4 pieces/min)
Welding current	300 to 1000 A stepless remote controllable
Welding time	5 to 2000 ms stepless remote controllable
Primary power	400 V (480 V), 16 A
Gas connection	Series
Air pressure connection	6 bar/inner hose dia. 6 mm, dia. 1/4"
Power source	Inverter
Controller	CEL M440, 186 GHz
Programming modes	Welding current, welding time, any motion profile, welding piston, shielding gas, fully controlled and tempered magnetic field former
Welding head	Linearmotor driven
Field former unit	Tempered
Pneumatic work lift	120 mm, 4.72"
Height adjustment	250 mm, 9.84"

Order No.

Welding rate	M12 / 1/2" = 25 studs/min
Welding current	1000 A (max.)
Current adjustment range	100 to 1000 A, electrode 50 to 400 A (stepless)
Welding time	5 to 1000 ms (stepless)
Primary power	400 V*, 3 phases, 50/60 Hz, 35 AT (slow blow) *alternative primary power see „Order No.“
Primary plug	32 A (with 400 V mains)
Connected load	50 kVA (with 400 V mains)
Cooling type	F (temperature controlled cooling fan)
IP Code	IP 23
Dimension LxWxH (without handle)	660 x 280 x 340 mm / 26" x 11" x 13.4"
Weight	31 kg / 68.343 lbs
Suitable guns/heads	PAH-1, KAH 412, KAH 412 LA

Order No.

93-60-1206 (400 V – process control)
93-66-1206 (480/460 V – process control)

IT 90

- 4 outputs (optional), process monitoring and shielding gas
- For critical surfaces (e.g. galvanised)

M3 to M24
#4 to 1"

(Ceramic ferrule only for manual application)

Welding process	ARC, SC
Welding material	
Technology	Inverter
Equipment	
Welding with ceramic ferrule	X
Welding with shielding gas	X
Process control	X
Automation	X
4 gun/head connections	(optional)
Display	Digital
Welding range	M3 to M24, dia. 2 to 22 mm / #4 to 1", dia. 14 ga to 7/8"
Welding rate	Dia. 22 / 7/8" = 6 studs/min
Welding current	2000 A (max.)
Current adjustment range	300 to 2000 A (stepless)
Welding time	5 to 1500 ms (stepless)
Primary power	400 V, 3 phases, 50/60 Hz, 63 AT (slow blow)
Primary plug	63 A (with 400 V mains)
Connected load	100 kVA (with 400 V mains)
Cooling type	F (temperature controlled cooling fan)
IP Code	IP 21
Dimension LxWxH (without handle)	650 x 560 x 1290 mm / 25.6" x 22" x 50.8"
Weight	145 kg / 319.67 lbs (1 gun conn.) 165 kg / 363.76 lbs (4 gun conn.)
Suitable guns/heads	PAH-1, KAH 412, KAH 412 LA

Order No.

93-60-12096 (400 V – 1 gun connection)
93-60-42096 (400 V – 4 gun connection)

Legend

Welding process: ARC = Drawn arc stud welding, SC = Short cycle stud welding

Mild steel Stainless steel Aluminium

IPC 90

- System integrators for integration into production lines
- Stud welding process self-sufficiently controlled by HBS components
- Parameter monitoring for optimal welding results
- For control of up to 5 welding heads

M3 to M8
#4 to 5/16"

Welding process	SC, PARC
Welding material	  
Welding range	M3 to M8, dia. 3 to 8 mm #4 to 5/16", dia. #4 to 5/16"
Stud length	8 to 40 mm / 0.31" - 1.57"
Welding capacity	Up to 20 studs/min
Welding current / Short Cycle	300 to 2000 A (stepless)
Welding time / Short Cycle	5 to 1000 ms (stepless)
Welding current / PARC	50 to 2000 A (stepless)
Welding time / PARC	5 - 150 ms (stepless)
Stud feeding	Automatic stud feeding
Display	Coloured
Pneumatic working stroke	Max. Z = 120 mm Max. Z = 4.92"
Welding head	KAH 612
Max. number of stud welding heads	5
Connections	Electrical: 400 V, 3 phases, 50/60 Hz; 35 AT (32 AT), Pneumatic: 6 bar
Cooling type	F (temperature controlled cooling fan)
Primary plug	32 A
IP Code	IP 21
Dimension LxWxH	Approx. 950 x 780 x 1150 mm Approx. 37.40" x 30.71" x 45.28"
Weight	Approx. 220 kg / 485 lbs

CPW Series

5

- Entry-level CNC stud welding machine with one welding head
- High speed with highest positioning accuracy by robust machine base frame
- Working with different work piece heights on a working range of 600 x 420 x 120 mm

M3 to M8 (dia. 10/12/12,7 mm only possible with modification)
#4 to 5/16" (dia. 3/8" to 1/2" only possible with modification)

Working range	600 x 420 x 120 mm / 23.6" x 16.5" x 4.7"
T-slot work plate	800 x 490 mm / 31.5" x 19.3"
Welding range	M3 to M8, dia. 3 to 8 mm (dia. 10/12/12,7 mm only possible with modification) #4 to 5/16", dia. #4 to 5/16" (dia. 3/8" to 1/2" only possible with modification)
Stud length	8 to 40 mm / 0.31" to 1.57" (other lengths on request)
Welding capacity	Up to 30 studs/min (depending on configuration)
Traverse speed	25 m/min (X-Y), 20 m/min (Z) / 82"/min X-Y, 65,6"/min Z
Stud feeding	Automatic stud feeding (up to 3 different stud length per welding head)
Positioning accuracy of welded stud	± 0,2 mm / ± 0,008"
Positioning and repeat accuracy	± 0,05 mm / ± 0,002"
Stud welding head	KAH 412 KAH 412 LA (mechanical length compensation - gap)
Max. number of stud welding heads	1
Connections	Electrical: 400 V, 16 A, 50 Hz; Pneumatic: 6 bar min./ 10 bar max./ inner hose dia. 6 mm
Motor-driven Z-axis	Z = 0 to 120 mm / 0 to 4.7" (free programmable because of servo drive technology)
Controller	High performance PLC IEC 61131-3
Display	9" Touchscreen
Keyboard	Touch
Dimension LxWxH	1600 x 950 x 1900 mm / 63" x 37.4" x 74.8"
Weight	Approx. 640 kg / 1410,96 lbs

Order No.

According to project

MPW Series

- High performance CNC stud welding machine (with up to 4 welding heads)
- Highest speed possible with high positioning accuracy through rugged design
- Very short set-up time (a.e. automatic calibration of Z-axes)
- Network connection

M3 to M8 (dia. 10/12/12.7 mm only possible with modification)
#4 to 5/16" (dia. 3/8" to 1/2" only possible with modification)

Working range	1250 x 1050 mm / 49.21" x 41.34" (MPW 1010); 1250 x 2250 mm / 49.21" x 88.58" (MPW 2010); (maximum working range for up to 3 welding heads)
Welding range	M3 to M8, dia. 3 to 8 mm (dia. 10/12/12.7 mm only possible with modification) #4 to 5/16", dia. #4 to 5/16" (dia. 3/8" to 1/2" only possible with modification)
Stud length	8 to 40 mm / 0.31" to 1.57" (other lengths on request)
Welding capacity	Up to 30 studs/min (depending on configuration)
Traverse speed	Up to 48 m/min / 157.48"/min
Stud feeding	Automatic stud feeding (up to 3 different stud lengths per welding head)
Positioning accuracy of welded stud	± 0,2 mm / ± 0,008" (depending on work piece and stud geometry)
Positioning and repeat accuracy	± 0,05 mm / ± 0,002"
Stud welding head	KAH 412 KAH 412 LA (mechanical length compensation - gap)
Max. number of stud welding heads	4 (up to 3 stud lengths per welding head possible)
Connections	Electrical: 400 V, 32 A, 50 Hz Pneumatic: 6 bar min. / 10 bar max. / inner hose dia. 6 mm / 1/4"
Motor-driven Z-axis	Z = 0 to 200 mm / 0 to 7.87" (free programmable because of servo drive technology)
Dimension LxWxH	2400 x 2700 x 3100 mm / 94.49" x 106.30" x 122.05" (MPW 1010); 3600 x 2700 x 3100 mm / 141.73" x 106.30" x 122.05" (MPW 2010)

MPW Accessories

Code Reader

Calling up welding programs made easy

Customer benefits

Time-savings

The code reader reduces your search and startup times for welding programs.

Error prevention

The code reader ensures the clear-cut assignment of your welding programs to the workpieces.

Order No. 88-21-127

Adjustment set for welding head

Ensuring the accuracy of the stud welding machine

Customer benefits

Independent testing and, if necessary, realignment of the position of the welding heads of the MPW series after changing welding heads.

Ensure the accuracy of the stud welding machine through periodic inspection of the welding head position.

Detection of hidden flaws or damage with regard to the welding head position.

Order No. 88-22-301B

CAD Software

HBS CAD converts a DXF-file into a CNC program

Customer benefits

Enables external programming by using a DXF file.

Time saving.

Error prevention.

Order No. 80-50-0660

Pneum. single feed unit PBZ	for: KAH 412
	for: installation in systems of the MPW series
M3	94-43-133
M4	94-43-134
M5	94-43-135
M6	94-43-136
M8	94-43-138

Pneum. single feed unit PBZ	for: KAH 412
	for: installation in systems of the CPW series (Basic kit 88-20-206 necessary)
M3	88-18-163
M4	88-18-164
M5	88-18-165
M6	88-18-166
M8	88-18-168

Pneum. single feed unit PBZ	for: KAH 412
	for: installation in automatic systems and systems of type PC-S
M3	94-43-033
M4	94-43-034
M5	94-43-035
M6	94-43-036
M8	94-43-038

Pneumatic stud feeding switch PBW complete	for: Feeding studs with the same diameter but different lengths into one automatic welding head
	for: installation in automatic systems
M3	80-08-0471B
M4	80-08-0472B
M5	80-08-0473B
M6	80-08-0474B
M8	80-08-0475B

PMB-S (vertical movement)	Pneumatic ground clamp including clamp, swivelling, single acting
	for: installation in systems of the MPW series, in automatic systems and systems of type PC-S
	90-60-011

PMB-S (vertical movement)	Pneumatic ground clamp including clamp, swivelling, single acting incl. sliding block
	for: installation in systems of the CPW series
	90-61-011

PMB-LS2 (horizontal and vertical movement)	Pneumatic ground clamp including clamp (double clamp = extra charge), linear swivelling, double acting
	for: installation in systems of the MPW series, in automatic systems and systems of type PC-S
	90-60-120

PMB-LS2 (horizontal and vertical movement)	Pneumatic ground clamp including clamp (double clamp = extra charge), linear swivelling, double acting incl. sliding block
	for: installation in systems of the CPW series
	90-61-120

	Welding current sensor	for: Signal output - welding current was active incl. connection cable (5 m)
		90-70-020
	Solenoid valve	for: switching the compressed air for manual stud feeding or for closing/opening the ground clamp
		80-10-188
	Utensil socket	for: Solenoid valve 80-10-188
		80-10-189
	Ring initiator	to: See if stud has been fed
	hole-Ø	
	10 mm	80-50-0083
	20 mm	80-50-491
	Coupling ring initiators	for: Connection between ring initiator and CNC control
		80-10-375
	ESS External weld start	for: HBS stud welding units with 7-pin-plug
		90-70-016

	Connecting line complete for welding head KAH 412 continuously	for: CDMi 2402, CDMi 3202, ARC 800, IT 1002
	3 m, 25 mm²	92-40-131
	5 m, 35 mm²	92-40-130
	Working stroke complete, with height adjustment (125/45 mm) without ring initiator	for: KAH 412
		80-09-760
	Working stroke complete, with height adjustment (125/45 mm) with ring initiator	for: KAH 412
		80-09-750
	Device for pneumatic fixture workpiece	for: KAH 412 to hold down the workpiece
	Stroke 100 mm	80-08-702
	Adjustment set for welding head position	for: KAH 412 for setting the welding head after a welding head change or as a quality measure to ensure the accuracy of the stud welding machines type MPW
		88-22-301B
	Code Reader	incl. software package for: for calling up welding programs via barcode in the control system of stud welding machines type MPW
		88-21-127
	CAD-Software	for: MPW series creating welding programs for MPW control
		80-50-0660
	RDS Software	for: MPW series for: Error analysis in the MPW control
		80-50-2011

Welding technique	Type of stud ¹⁾	Symbol for stud	Symbol for ceramic ferrule
Stud welding with tip ignition - CD	Threaded stud (pitch) ²⁾	 PT	—
	Unthreaded stud (pin) ²⁾	 UT	—
	Stud with internal thread ²⁾	 IT	—
	Ground clip single style	 F1	—
	Ground clip double style	 F2	—
Drawn arc stud welding with ceramic ferrule or shielding gas - ARC	Threaded stud with reduced shaft ²⁾	 RD	 RF
	Virtually fully-threaded stud	 MD (DD)	 MF (UF)
	Partially threaded stud (pitch) ²⁾	 PD	 PF
	Unthreaded stud (pin) ²⁾	 UD	 UF
	Stud with internal thread ²⁾	 ID	 UF
	Shear connector ²⁾	 SD	 UF/DF
Short cycle drawn arc stud welding - SC	Threaded stud (pitch) with flange ²⁾	 PS	—
	Unthreaded stud (pin) with flange ²⁾	 US	—
	Stud with internal thread and flange ²⁾	 IS	—

¹⁾ Further types of stud and ceramic ferrules can be specified as required for special applications.

²⁾ according to standard DIN EN ISO 13918

HBS – The Best Solutions

Our products are made and based on over 40 years of development experience and know how in stud welding technology. HBS welding elements encompass this technology. Use of HBS welding elements guarantees a continuous high quality weld.

The five major welding processes of capacitor discharge, drawn arc, short cycle, insulation and MARC have been designed to cover a wide range of applications. They are most commonly utilised for: vehicle construction, automotive supply industry, steel construction, mechanical engineering, electrical engineering, apparatus /

casing construction, control panel, cabinet construction, commercial kitchens, laboratory and health techniques, food industry, household appliances, information technology, metal fittings, curtain walling, steel construction, ventilation construction, insulating techniques, fire-proof insulation of power and combustion plants, vessel construction, shipbuilding etc.

With HBS stud and equipment products and technology, major benefits are realised from finding every thing from one source.

As a complete system provider you have one supplier, cost effective, fast delivery along with sustained high quality. This also applies to a variation in studs e.g. threaded studs, pins, studs with internal threads, ground clips, pads.

Additionally we supply customised welding elements and offer different accessories. Therefore we have a separate welding elements and accessories catalogue.

Leading through Technology, Quality and Service
