## 4" Steel Model E4

Bulletin SS01011 Issue/Rev. 0.8 (2/15)

# SMITH METER® PD METERS ROTARY VANE METER

The **Smith Meter® Model E4 Meter** is a double-case, straight-through positive displacement meter. It incorporates 4-inch ANSI flanges and should be applied in flow systems that handle rates typical of 3-inch systems, but have 4-inch piping due to pumps and pressure loss considerations. Applications include: blending, batching, dispensing, inventory control, and custody transfer. The relatively high intermittent rating is for use on systems that would require this flow rate infrequently.

#### **FEATURES**

- Superior Accuracy The Smith Meter® Rotary Vane meter principle, combined with the meter's uniquely designed (offset) inlet and outlet nozzles, minimizes pressure drop across the measuring chamber, which reduces flow through meter clearances to maximize accuracy.
- » Low Pressure Drop Streamlined flow path provides low pressure drop.
- Positive and Accurate Registration High torque drive calibrator with adjustment in 0.05% increments ensures accurate registration.
- » Long Service Life Low friction ball bearings, fixed cam-type timing, and rugged construction give sustained accuracy and long service life.

We put you first. And keep you ahead.

#### **OPTIONS**

- » High Viscosity Meter Clearances To extend operation at maximum flow rate from 400 mPa •s to 2,000 mPa •s.
- » High Temperature Clearances To extend operating temperatures from 150°F to 200°F (65°C to 93°C).
- » All Iron Trim For operating temperatures above 200°F (93°C).
- » LPG Trim For low lubricity liquids such as LPG.
- » NACE Construction Special components available to meet requirements of NACE Standard MR-01-75.

## OPERATING SPECIFICATIONS
